Dylan Gray Didier

Orlando, FL | dgd0020@auburn.edu | (407) 493-0080

EDUCATION & HONORS

Auburn University | Samuel Ginn College of Engineering **Major GPA: 3.57/4.00**
Major: Computer Science Expected Graduation: May 2028
Artificial Intelligence Certification: Auburn University (Expected: May 2028)

PROFESSIONAL EXPERIENCE

HADDY | St. Petersburg, FL May 2026 – July 2026
Software Engineering Intern

- Optimized the factory QA process by building a handheld defect logger (Raspberry Pi, Python, ToF sensors) that automatically calculates measurements and syncs data to the cloud
- Developed a Node.js edge driver to control physical factory status lights, handling real-time data lookups in O(1) time with sub-75ms API latency
- Architected a Grafana and ClickHouse SQL pipeline to monitor live machine states, improving factory awareness by delivering clear, real-time telemetry updates to operators
- Programmed a custom internal website from scratch (HTML, CSS, JavaScript) to replace scattered company folders, creating a single searchable platform for factory training and hardware documentation

ORCA Labs | Auburn, AL August 2026 – Present
Machine Learning Research Assistant

- Contributing towards building spatio-temporal action-anticipation algorithms optimized for real-time execution on Meta smart glasses hardware

PROJECTS

Personal Website June 2026

- Designed and developed a responsive engineering portfolio from scratch using HTML, CSS, and JavaScript
- Managed version control via Git and deployed the production build globally via Cloudflare's edge network

Auburn–Regions Data Hackathon: Loan Default Prediction (3rd Place) October 2026

- Trained a LightGBM loan-default model in Python on 45,000 applications using 5-fold cross-validation and SHAP explanations, outperforming the team's logistic scorecard baseline (AUC 0.746 vs. 0.742)
- Prioritized the 10-input logistic regression scorecard as the final model, giving up 0.004 AUC for a points system that shows every declined applicant the specific reasons behind the decision
- Co-designed a profit-based lending policy that approves, declines, or offers a smaller loan by weighing expected profit against expected loss; our team's final strategy approved 69% of applicants at a 6.2% default rate

LEADERSHIP & ACTIVITIES

Association for Computing Machinery | Auburn, AL August 2025 – Present

- Cultivated a network of peers within computing through chapter events and guest-speaker sessions, gaining exposure to broader computing-community discussions and career-focused insights

Sigma Pi Fraternity | Auburn, AL August 2024 – Present
STEM Study Group Leader

- Organized and led study sessions four times a week for new members pursuing STEM majors, creating a supportive academic environment

SKILLS & INTERESTS

Languages: Python, Java, C++, JavaScript (Node.js), SQL, HTML, CSS
ML & Data: scikit-learn, LightGBM, SHAP, Pandas, NumPy, Matplotlib
Tools: Git, Grafana, Cloudflare, Raspberry Pi
Interests: Artificial Intelligence, Cryptocurrency, Snowboarding, High Diving, Tennis, Golf, Soccer, Football, Gym
